

Thanugundla Sumith Reddy

s_thanug@live.concordia.ca • 514-295-7012 • LinkedIn • [GitHub](#)

SUMMARY OF SKILLS AND QUALIFICATIONS

Programming Languages | Java • Python • JavaScript • C++ • HTML/CSS

Frameworks & Libraries | Play Framework • Pekko (Actor Model) • React • Hugging Face Transformers • scikit-learn • NLTK

Tools & Platforms | Git/GitHub • VS Code • IntelliJ IDEA • MongoDB • Tinkercad

Languages | English (Fluent) • Hindi (Fluent) • Telugu (Fluent) • Tamil (Basic)

Certifications | IBM Cloud Essentials V3—IBM / Cognitive Class (Dec 2024)

EDUCATION

Master of Engineering, Software Engineering 2026–2028 (In Progress)

Concordia University, Montreal, QC

Bachelor of Engineering, Computer Science and Engineering—AI & ML Specialization 2021–2025

Sathyabama Institute of Science and Technology, Chennai, India

- GPA: 9.1 / 10
- Relevant Courses: Machine Learning, Deep Learning, Applied AI, Data Structures, Advanced Programming Practices

PUBLICATIONS

Enhancing Support for Mental Health: An Automated System for Classifying Text and Audio Data to Determine Suicidal and Depression Tendencies Feb 2025

Co-authored with T. Hari Durga Prasad and Dr. M. Shanthi Thangam

- Presented at the 2nd International Conference on Multi-Strategy Learning Environment (ICMSLE-2025), Graphic Era Hill University, India
- Published by Springer as part of the conference proceedings

PROJECTS

Mood & Mental Health Risk Detection System—Final Year Project 2024–2025

Sathyabama Institute of Science and Technology

- Developed a machine learning model to classify emotional states (happy, sad, depressed, disappointed) and flag suicidal/depression tendencies from text and audio data, achieving 87% classification accuracy
- Built a recommendation engine that suggested curated videos to help users cope with negative moods based on the predicted emotional state
- Applied NLP techniques in Python for text preprocessing, feature extraction, and model training
- Collaborated with a team of 4 to design, build, and evaluate the end-to-end pipeline; findings were later published and presented at an international conference (see Publications)

Flicklytics—Reactive Movie & TV Analytics Platform 2026

Team Project (SOEN 6441), Concordia University

- Collaborated in a team of 5 to build a full-stack reactive web application using the Play Framework (Java) and Pekko Actor model, fetching real-time movie, TV, and person data via the TMDb API
- Designed and implemented the Financial Performance module: a dedicated Pekko actor that asynchronously calculates budget vs. revenue/ROI metrics, with a supervisor strategy to auto-restart on API failures for fault tolerance
- Built the majority of the frontend (HTML/CSS), including the UI for search results and analytics views
- Contributed to a system featuring live WebSocket-based search, sentiment analysis, and readability scoring (Flesch-Kincaid), with dependency injection (Google Guice) and JUnit/Mockito testing

OurSpace—Instagram-Style **Social Media** App 2025

Personal Project

- Independently designed and built a full-stack social media application featuring photo posting, likes, and stories, inspired by Instagram's core functionality
- Built the frontend with React and integrated a backend/database to handle user posts, media storage, and interactions
- Used AI-assisted development tools to accelerate the build while owning the app's architecture and UX design

WORK EXPERIENCE

Software Intern, April 2025 – December 2025

Vyomik Drones Hyderabad, *India*

- Contributed to the development of a conversational AI Q&A model, assisting with data collection, cleaning, and preprocessing of training datasets
- Fine-tuned LLaMA-based language models using Python and Hugging Face Transformers to improve response accuracy and relevance
- Built and tested API endpoints to integrate the model into the company's application, enabling real-time query handling
- Collaborated with a small team of 3 developers in a fast-paced startup environment, contributing to daily stand-ups and code reviews
- Evaluated model outputs against benchmark datasets and iterated on prompts/fine-tuning to reduce irrelevant or inaccurate responses

VOLUNTEER WORK

Event Volunteer, Graduation Ceremony

May 2024

Sathyabama Institute of Science and Technology, Chennai, *India*

- Assisted with event logistics over a 3-day program, including stage setup, guest/parent seating coordination, and entry management
- Supported backstage operations, including coordinating music and audio cues during the ceremony

INTERESTS

Sports: Kabaddi, Cricket, Running (school-level competition)

Anime: Attack on Titan, Jujutsu Kaisen, Naruto, Demon Slayer..

Games: COC, Clash Royale, Valorant, PUPG, Brawl Stars.
